

Introduction

Some of us were lucky enough to catch the opening game of the Soccer World Cup - it was absolutely amazing to be part of the experience and made us very proud to be South African. That craziness is almost behind us now and we are all ready for the second half of this year. Needless to say, the Saker clan entered into the spirit of things!

Soccer will never be the same, the Saker boys-boys.

amplats as new customer

We would like to welcome Anglo Platinum as a new customer. Everyone here are MineWare is very excited by the collaboration and the opportunities for growth and development that it offers us.

Mineware software is currently running on Khomenani shaft as a pilot project. Once all the group specific changes and enhancements have been developed, the system will be rolled out throughout the group as a whole.

featured product

Call logging system

MineWare recently completed a call logging system for Gold Fields, which enables relevant personnel to directly log any errors, thereby enabling the mine to keep better track of the whole error reporting process. The system keeps track of what the fault was, who is responsible and what the status of the fault is. If the fault is not attended to in due time the system elevates it to the next level of responsibility, ensuring that all faults are dealt with promptly and effectively.

general developments

Mineware recently completed Phase 1 and Phase 2 of the web based mechanised production monitoring system for South Deep, on time and within budget. This system will revolutionise mining reporting as it is currently being used in the industry.

staff

Tebogo had a baby boy, Tlamelo Monwane on the 25th of May 2010. Congratulations from everyone here at MineWare.

Ian Saker (General Manager)
